The University of Texas at San Antonio

For this dynamical system,

$$
x_{k+1}=x_{k}+3 u_{k}, x_{0}=10
$$

find $u_{0}^{*}, u_{1}^{*}$ and then $x_{1}^{*}, x_{2}^{*}$ such that $J=\sum_{k=0}^{1} u_{k}^{2}+2 x_{k}^{2}$ is minimized, using the principle of optimality and dynamic programming.

## Solutions:

Similar to the example in Module 05 , solution is: $u_{0}^{*}=-120 / 38$ and $u_{1}^{*}=0$.
